Season Select

GET /Season

Changing a season with the drop down changes the data in the first 2 tables to reflect the chosen season. The third table is unchanged since it is split from season to season - it remains constant.

POST /Stats

To update, a manager will select the relevant table, and then update the fields within it.

GP indicates the game was played. And the following fields are text inputs that indicate the stats that match the score book.

These fields then are used to calculate additional statistics within the database.

Cancel refreshes the page with no game selected and no input saved.

Save refreshes the page with the inputs added and no game selected.
